Snow Removal Business Manager

Quick start guide · Google Sheets & Excel

Open it

Excel: double-click *Snow-Removal-Business-Manager.xlsx*.
Google Sheets: go to drive.google.com → New → File upload → choose the file → open it → **File › Save as Google Sheets**. Work in the Google Sheets copy.

Set up (10 minutes)

1. **Settings:** your business name and contact, hourly labor cost, tax set-aside %, mileage rate, and your service prices. Add-on prices, quote factors, average pushes per season, contract discounts, expense categories, payment methods and crew names are all editable here.
2. **Clients:** one row per client: service, contract type (per push, seasonal contract or one-time), price per push, and stake, parking and access notes.
3. Delete the rows marked **EXAMPLE** in Clients, Jobs and Expenses.

Every day

- **Jobs:** after each storm, log one row per push. Pick the client and the price fills in. Use *Price override* for a one-off price and *Add-on charges* for extras. Set *Paid?* to Yes when you're paid.
- **Expenses:** log supplies, fuel, insurance and other costs.
- **Clients** shows each client's pushes, lifetime revenue and unpaid balance. Clients who owe you are highlighted.

When you need it

- **Quote Calculator:** enter area, snow depth tier, obstacles, add-ons and contract type to get a per-push price, a season contract price, estimated hours and profit.
- **Invoice:** type a Job ID (for example J-0012). Print it or save it as a PDF.
- **Dashboard:** type the year your season starts (2026 = July 2026 to June 2027) to see revenue, costs, profit, margin and unpaid totals by month.

Color key: yellow cells with blue text are yours to type in. White cells calculate automatically, so don't type over them.
Tip: keep client names exactly the same in Clients and Jobs. The dropdown does this for you.

The tax set-aside is a planning estimate, not tax advice. Questions? Message us on Etsy and we'll help.
