Handyman Business Manager

Quick start guide · Google Sheets & Excel

Open it

Excel: double-click *Handyman-Business-Manager.xlsx*.
Google Sheets: go to drive.google.com → New → File upload → choose the file → open it → **File › Save as Google Sheets**. Work in the Google Sheets copy.

Set up (10 minutes)

1. **Settings:** your business name and contact, hourly labor cost, tax set-aside %, mileage rate, minimum job charge, and your flat-rate job menu (job, price, hours). Add-on prices, quote factors (extra units, difficulty, materials markup), repeat-plan discounts, expense categories, payment methods and worker names are all editable here.
2. **Clients:** one row per client: usual job, repeat plan (monthly, quarterly, every 6 months, or One-time) and usual price, plus access and tenant notes.
3. Delete the rows marked **EXAMPLE** in Clients, Jobs and Expenses.

Every day

- **Jobs:** log each job. Pick the client and the price fills in. Use *Price override* when this job's price differs, *Materials & extras billed* for parts you charge the client, and *Materials cost* for what you paid. Set *Paid?* to Yes when you're paid.
- **Expenses:** log supplies, fuel, insurance and other costs.
- **Clients** shows each client's next due date. Overdue and due-soon clients are highlighted.

When you need it

- **Quote Calculator:** pick a job, then enter materials cost, units, difficulty and add-ons to get a price (marked-up materials included, never below your minimum), estimated hours and profit.
- **Invoice:** type a Job ID (for example J-0012). Print it or save it as a PDF.
- **Dashboard:** type the year to see revenue, costs, profit, margin and unpaid totals by month.

Color key: yellow cells with blue text are yours to type in. White cells calculate automatically, so don't type over them.
Tip: keep client names exactly the same in Clients and Jobs. The dropdown does this for you.

The tax set-aside is a planning estimate, not tax advice. Questions? Message us on Etsy and we'll help.
